

Construction Pro Manager Software Provides Instant Support for Busy Construction Professionals

1888 PressRelease - New York's Construction Pro Manager offers constant support to construction project managers and superintendents working on large projects that require extensive planning.

Construction managers and superintendents are facing their busiest time of the year. To that end, Construction Pro Manager (www.ConstructionProManager.com) is offering their software program to assist these busy professionals in making sure that they have easy, instant access to the information they need to get, and keep, their project moving forward.

"This is the best time of the year to start with a new system," explained Founder and President of Construction Pro Manager Andrew Arena. "Construction Pro Manager allows construction professionals to quickly save, store and access the information they need whether they are in the office, in their truck or walking on site. Simply said, this flexibility keeps projects moving forward."

Arena understands the chronic stress that disorganization can bring to a large building project. A construction manager himself, Arena lived the challenges of ensuring that he had all the paperwork he needed on an everyday basis to keep projects progressing. Through that experience, he saw an opportunity. The Construction Pro Manager software system offers a platform that systematically organizes every piece of information and building records. Developed using an intuitive organizational structure, users can begin to take advantage of Construction Pro Manager's document control system almost immediately after registering online and downloading the free mobile app on their laptop or tablet.

Users appreciate the wide variety of tools included in Construction Pro Manager, including the insurance/bond log, permit log, change order log, project schedule log and a request for proposal log. This comprehensive tool has given construction managers a tangible way to stay ahead of their project.

"Construction Pro Manager is the best way to store records that you might need at a moment's notice," said Arena. "Professional construction managers who have experienced our software are amazed at how quickly they can answer questions from their management team and how it has streamlined their work."

To try Construction Pro Manager, take advantage of a free 30 day trial. The download can be accessed at www.ConstructionProManager.com.

About Construction Pro Manager:

Construction Pro Manager was founded during 2013, and launched its first software products, Construction Pro Manager and Construction Pro Administrator, during December 2014. This document control software for the construction industry enables subscribers to organize, store and access their documents in an intuitive, cloud-based, password-protected user-friendly format that requires minimal training. The system consists of 40 construction-based logs organized in three primary categories: Administrative, Technical and Field.
